AvePoint® Accessibility Accelerator

Optimize. Remediate accessibility gaps in the framework of Microsoft® SharePoint® 2013, SharePoint 2010, and SharePoint 2007 environments.

Key Benefits

- Comply with US and global accessibility guidelines to optimize accessibility as well as avoid costly litigation and damaged brand equity

- Quickly address and remediate accessibility gaps or violations across your SharePoint web content by implementing accessible cascading style sheets (CSS), master pages, templates, and improvements for Web parts and other design elements as accessible options for out-of-the-box or custom components

- Enhance SharePoint's user experience to better accommodate employees, consumers, and partners to protect your organization's business opportunities and reputation

Closing SharePoint Accessibility Gaps

Microsoft SharePoint has quickly become the go-to enterprise content management platform. Natively, however, SharePoint's interface may need enhancements for accommodating users with disabilities, which represent approximately 10 percent of the world's population today. In order to optimize the accessibility of your SharePoint environment so that it is accessible and available to those who need it, AvePoint Accessibility Accelerator can implement accessible master pages, design elements, web parts, and cascading style sheets (CSS) to quickly conform SharePoint sites to the latest accessibility guidelines – including Section 508 of the Rehabilitation Act Amendments in the United States and the World Wide Web (W3C) Web Content Accessibility Guidelines (WCAG) 1.0 and 2.0.

Technical Features

▪ Update out-of-the-box SharePoint Master Pages to address accessibility guidelines by implementing HTML Accessibility Methods as well as Accessible Rich Internet Applications (ARIA) guidelines

▪ Modify CSS for SharePoint 2013, SharePoint 2010, and SharePoint 2007 deployments to implement resizable text by modifying your SharePoint Master Pages with AvePoint's accessible CSS

▪ Quickly adjust text sizing directly or by modifying the CSS file to a fixed or proportional value with the Text Resizing Calculator

▪ Built-in or customizable Control Adapters for native SharePoint Web Parts and design elements ensure rendered content and web part outputs are made accessible, including adding alternate text to images

▪ Automatically associate visual text labels to form elements – in SharePoint Web Parts, Search boxes, and Blog sites for instance – with form controls

▪ Identify iFrames with descriptive text

▪ Replace text displayed on SharePoint web pages through a configuration file to correct accessibility violations for HTML and XHTML

▪ Supports SharePoint 2013, SharePoint 2010, and MOSS 2007

SharePoint web pages are programmatically optimized and quick remediation of accessibility errors in HTML code is available.
