PERIMETER

Secure File Sharing

Step 1

Bob, your employee, needs to share a sensitive document with Suzy, a partner outside your organization.

Step 2

Bob logs into SharePoint as usual and locates the document.

Step 3

Bob sends Suzy an invitation to view the shared document using AvePoint Perimeter's "Secure Share" feature.

Step 4

Based on the document's security policies set by Bob, Suzy is given two options to view the document:

Option 1:
On a browser, Suzy is required to register and view the document within the AvePoint Perimeter portal.

Option 2:
Within the AvePoint Perimeter mobile application, Suzy is required to register, enroll her device, and view the document.

Step 5

Once the project is complete, Bob logs into the Perimeter portal and removes Suzy's access to the shared document.

End Result

Bob & Suzy
Easily shared and collaborated on a project.

Your Organization
Reduced risk associated with external sharing of content.

IT Administrators
Audited and ensured full control over the security of the shared content.
